.rar removal software freeware from Softempire. Category:Utilities. Author:Softempire. All .rar On a Windows PC, the easiest method of repairing this problem is to use the Windows 7 ISO and Windows Repair Disk. These are available at the official Microsoft web site. For more details, see Troubleshooting Windows Error 0x800f0907 (BootMgr Missing or Boot Image Missing) on PC. Installing this will include Windows XP and Vista, by default. But also in a separate installation medium (like CD), it is enough to have the operating system installation, and the repair medium, or CD/DVD, on the same PC. Then run the installer. If you see an error, then follow the instructions in the article. If you installed Windows 7, and the installation of Windows 7 was successful, you may not need to install Windows Vista again, because Windows Vista should be installed when the operating system on your PC is Windows 7. But if you use an earlier version of Windows, you need to install Windows Vista again, because the older version of Windows Vista does not run. Do not forget that all of the PC driver components that are responsible for the functionality of your PC should be installed. If not, the system may not be able to start. In addition to the above steps, you can also try and repair it manually. If you have the Windows 7 repair disk or other Windows 7 ISO, then you can boot your PC using the repair disk, or install the Windows 7 ISO on your PC using the recovery console, and run the repair disk again. Please refer to the articles How to Repair Windows XP SP2 with WinRE ISO and How to Repair Windows Vista using Windows 7 Repair Disk. If Windows is missing from your device, you should try to check if Windows is installed or not. For this, you will need to open the Start Menu, select Accessories, and open Command Prompt. If Windows is installed, it should display the word "Windows." If Windows is missing, it should display the word "WindowsError." If Windows is installed on your device, then you can run a command to fix the bootmgr boot file. You should run a command to fix Windows bootmgr boot file as follows: BCDEdit.exe /fixmbr BCDEdit.exe /fixboot bededit /set {default} bootstatuspolicy ignored
